

## **MedLite C6 Owners Comments**

"It is widely known that this Q-switched Nd:YAG laser system is the overall best tool for tattoo removal, but I mainly appreciate its speed and versatility. Low fluence green is a good option for removing the benign pigmented lesions of photoaging. Scars, especially acne scars usually improve over several months after moderate fluence treatment at 1064 nm. Clinically, this laser is a workhorse."

**R. Rox Anderson, MD**

Boston, MA

"The MedLite Laser is so easy to use that I can properly train and oversee my nurses, and obtain high-quality results - this is invaluable. I generate a minimum of \$25,000 a month from my MedLite lasers alone. I can honestly say that I could not conceive of practicing the style of Dermatology that I now perform without this absolutely invaluable instrument."

**Bruce Saal, M.D.**

Los Gatos, California

"The MedLite laser procedures offer patients the safest and least invasive way to effectively minimize the appearance of wrinkles and scars in any skin type. Used alone or in combination with other procedures, laser toning is a standard in minimally invasive cosmetic rejuvenation."

**Paul Jarrod Frank, M.D.**

Director of 5<sup>th</sup> Avenue  
Dermatology Surgery & Laser Center

"The C6 delivers very high energies, using a highly uniform, large spot making tattoo removal extremely fast and effective. I have been very impressed with the results, and more importantly so are my patients. There is no room for compromise in an aesthetic laser practice."

**Eric Bernstein, M.D.**

**Bryn Mawr, PA**
